

Biopsy-Bone Marrow Trepine

Patient : Ishamma T M Date : 20-Nov-2025 13:09
MR No : 000384802 Referring by : Dr. Ashwin V Nair
Age : 01-Jul-1944(81y) Bill No : L085234025
Gender : Female

Billed at : 20-Nov-2025 12:50 Sample ID generated at : 20-Nov-2025 13:09
Authorized at : 26-Nov-2025 10:48 Sample Accepted at : 20-Nov-2025 14:49

Biopsy No : B25-15264

HISTOPATHOLOGY REPORT

Nature of specimen : Bone marrow biopsy

Clinical details : Complaints of Pancytopenia

Macroscopy : Two brownish linear cores of tissue each measuring 0.3cm (1 bit AE).

Microscopy : Bony core showing 6-7 fragmented marrow spaces showing extensive crushing. Focal area shows 60% cellularity with atypical mononuclear cell infiltrate admixed with normal hematopoietic precursors.

Reticulin -Grade 1-2.

PAS - No additional findings.

Perls - Inconclusive.

Diagnosis : Bone marrow biopsy :

- Fragmented marrow tissue with crushing and immature cell infiltrate admixed with hematopoietic elements.
- Please follow bone marrow aspiration / flow cytometry report .
